Products Detail

PVC Coated Machine

Wire PVC coating line is used to produce PVC insulated wire,the customer can produce insulated wire of different size by changing the machine head and related accessories. The extruder and tractor apply YCT series governor motor with big range of speed adjustment;we use the intelligent temperature control instrument to control the temperature of the capstan and head automatically with high sensitivity.The structure of the production line is simple,easy to operate,safe and reliable. Technical specification:

Mold	SM-CM-001
Bare wire diameter	0.5~4.5 mm
Coil in speed	6~60 m/min
Screw diameter	45 mm, 65mm,80mm
L/D ratio(L/C)	25:1
Pressure ratio	1:3
Motor power	5.5kw(frequency motor)
Heating power	7kw
Hauling power	1.5kw(variable frequency motor)
Reel diameter	400~630mm
Auto-feeding apparatus	900w(300kg/h)
Plastic drying apparatus	4.75kw(volume 25kg)

Main Component of This Machine:

- (1) Non-axle pay-off frame
- (2) Level coil in apparatus
- (3) Host Extruder
- (4) Full-computerized controlled cabinet
- (5) 2m Cooling channel
- (6) Drying machine
